安装Kali-Linux和Windows构成双系统

cn_windows_8_x64_6in1.iso

Kali-linux安装之后的简单设置

2013-05-24 22:57:54 | 分类: Linux系统 | 标签: kali-linux linux设置

订阅|字号

1.更新软件源:

root权限:

leafpad /etc/apt/sources.list

然后添加以下较快的源:

deb http://http.kali.org/kali kali main non-free contrib

deb-src http://http.kali.org/kali kali main non-free contrib

deb http://security.kali.org/kali-security kali/updates main contrib non-free

deb http://ftp.sjtu.edu.cn/debian wheezy main non-free contrib

deb-src http://ftp.sjtu.edu.cn/debian wheezy main non-free contrib

deb http://ftp.sjtu.edu.cn/debian wheezy-proposed-updates main non-free contrib

deb=src http://ftp.sjtu.edu.cn/debian wheezy=proposed=updates main non=free contrib

deb http://ftp.sjtu.edu.cn/debian-security wheezy/updates main non-free contrib

deb-src http://ftp.sjtu.edu.cn/debian-security wheezy/updates main non-free contrib

deb http://mirrors.163.com/debian wheezy main non-free contrib

deb-src http://mirrors.163.com/debian wheezy main non-free contrib

deb http://mirrors.163.com/debian wheezy-proposed-updates main non-free contrib

deb-src http://mirrors.163.com/debian wheezy-proposed-updates main non-free contrib deb-src http://mirrors.163.com/debian-security wheezy/updates main non-free contrib deb http://mirrors.163.com/debian-security wheezy/updates main non-free contrib 保存之后运行: apt-get update && apt-get dist-upgrade

2.kali-linux安装中文输入法(以下任意选择一种安装):

apt-get install fcitx-table-wbpy ttf-wqy-microhei ttf-wqy-zenhei #拼音五笔 apt-get install ibus ibus-pinyin #经典的ibus apt-get install fcitx fcitx-googlepinyin fcitx-pinyin fcitx-module-cloudpinyin #fcitx拼音 注销,重新登录之后才可以使用。

3.kali-linux安装flash player:

apt-get install flashplugin-nonfree update-flashplugin-nonfree --install

4.kali-linux安装qq2012

root权限:

(1) dpkg --add-architecture i386
apt-get update
apt-get install ia32-libs libnotify-bin ia32-libs-gtk
#如果是32位操作系统,这步可以跳过

(2) 下载这个库文件(alsa-lib):

http://pan.baidu.com/share/link?shareid=470635&uk=1209563959 cd到下载目录

bzip2 -d alsa-lib-1.0.26.tar.bz2 && tar -vxf alsa-lib-1.0.26.tar && cd alsa-lib-1.0.26/ && ./configure && make && make

install && make clean

(3)下载安装wineqq2012:

 $wget\ http://www.longene.org/download/WineQQ2012-20121221-Longene.deb\ \&\&\ dpkg\ -i\ WineQQ2012-20121221-Longene.deb$ Longene.deb

附: kali-linux安装WineQQ2013:

http://xiao106347.blog.163.com/blog/static/215992078201311512333509/

5.更新并汉化iceweasel

deb http://mozilla.debian.net/ wheezy-backports iceweasel-release #添加这个软件源 apt-get install pkg-mozilla-archive-keyring #导入PGP KEY

gpg -- check-sigs -- fingerprint -- keyring / etc/apt/trusted.gpg. d/pkg-mozilla-archive-keyring.gpg -- keyring / usr/share/keyrings -- keyrings -- keyrings

/debian-keyring.gpg pkg-mozilla-maintainers #新建钥匙环

apt-get -y update && apt-get install -t wheezy-backports iceweasel && apt-get install iceweasel-l10n-zh-cn

5.安装一些工具:

apt-get install gnome-tweak-tool #安装gnome管理软件
apt-get install synaptic #安装新立德
apt-get install software-center #安装ubuntu软件中心
apt-get install file-roller #安装解压缩软件
apt-get install audacious #audacious音乐播放器
apt-get install smplayer #安装smplayer视频播放器
apt-get install terminator #安装多窗口终端

```
root@KALt/home/MACKING

- U - do not display unknown signatures
- do not display unknown signatures
- do not display unknown signatures
- do not display known signatures (for tests)
- K - do not display known signatures (for tests)
- K - do not display known signatures
- C - report signatures even for known systems
- A - go into RST/RST-ACK mode (semi-supported)
- R - go into RST/RST-ACK mode (semi-supported)
- Q - go into stray ACK mode (semi-supported)
- T - resolve host names (not recommended)
- Q - be quiet - no banner
- V - enable support for 802.10 VLAN frames
- P - switch card to promiscuous mode
- d - daemon mode (fork into background)
- L - use single-line output (easier to grep)
- X - display payload string (useful in RST mode)
- C - run signature collision check
- L - add timestamps to every entry
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) N. Zalewski < lcamtur@dione.cc>, M. Stearns <a href="wigned-collision-check">withy: 83%</a>
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)

- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) Host 115. 239. 210. 27 Running 05: "Cisco IOS 12.0" (Guess probability: 83%)
- (i) Host 115. 239. 210. 27 Running 05: "Cisco
```

6.开启gnome 3的标准模式:

gsettings set org.gnome.desktop.session session=name gnome
gsettings set org.gnome.desktop.session session=name gnome=fallback
gnome=shell = replace

#这个模式比较流畅 #还原默认模式 #在默认模式临时开启

经典模式:

7.kali安装chromium浏览器:

apt-get install chromium-browser

此时可以在应用程序—互联网下面找到chromium,如果是普通用户,可以立即使用,如果当前是root账户登录的系统,打开chromium提示Chromium can not be run as root;

解决linux下root账户无法打开chromium的方法:右键桌面chromium图标,选属性;或打开主菜单,找到chromium,点属性:

往命令框之后添加一个空格,然后再添加一user-data-dir \$HOME, close

这是完整命令: /usr/bin/chromium %U --user-data-dir \$HOME, close

也可以把一一user-data-dir \$HOME写入/usr/bin/chromiun文件的尾部,这样彻底些

同样,安装google-chrome也是一样的(/usr/bin/google-chrome)

关闭之后就可以打开了!

8.Kali-linux设置vpn代理:

依次执行以下命令之后就可以陪置vpn了:

apt-get install network-manager-openvpn-gnome

apt-get install network-manager-pptp

```
apt-get install network-manager-pptp-gnome apt-get install network-manager-strongswan apt-get install network-manager-vpnc apt-get install network-manager-vpnc-gnome
```

/etc/init.d/network-manager restart

9. 安装VMware和VirtualBox

链接: http://xiao106347.blog.163.com/blog/static/2159920782013928288628/

10.运行 Metasploit Framework(转,原文地址: http://www.backtrack.org.cn/thread-12664-1-1.html)

依照kali linux网络服务策略,Kali没有自动启动的网络服务,包括数据库服务在内。所以为了让metasploit以支持数据库的方式运行有些必要的步骤。

启动Kali的PostgreSQL服务: Metasploit 使用PostgreSQL作为数据库,所以必须先运行它。

service postgresql start

可以用ss -ant的输出来检验PostgreSQL是否在运行,然后确认5432端口处于listening状态。

State Recv-Q Send-Q Local Address:Port Peer Address:Port

LISTEN 0 128 :::22 :::*8

LISTEN 0 128 *:22 *:*3

LISTEN 0 128 127.0.0.1:5432 *:*4

LISTEN 0 128 ::1:5432 :::*

启动Kali的Metasploit服务:随着PostgreSQL的启动和运行,接着我们要运行Metasploit服务。第一次运行服务会创建一个msß数据 库用户和一个叫msf3的数据库。还会运行Metasploit RPC和它需要的WEB 服务端。

service metasploit start

在Kali运行msfconsole: 现在PostgreSQL 和 Metasploit服务都运行了,可以运行 msfconsole, 然后用 db_status 命令检验数据库的连 通性。

msf > db_status

[*] postgresql connected to msf3

msf >

配置Metasploit随系统启动运行:如果你想PostgreSQL和Metasploit在开机时运行,你可以使用update-rc.d启用服务。

update-rc.d postgresql enable

update-rc.d metasploit enable

```
Tired of typing 'set RHOSTS'? Click & pwn with Metasploit Pro
   type 'go_pro' to launch it now.
      =[ metasploit v4.7.0-2013082802 [core: 4.7 api: 1.0]
--=[ 1161 exploits - 641 auxiliary - 180 post
--=[ 310 payloads - 30 encoders - 8 nops
<u>ısf</u> > db_status
     postgresql connected to msf3
```

附: metasploit连接数据库: http://xiao106347.blog.163.com/blog/static/2159920782013101224632205/
